About Me!

Software Engineering enthusiast with strong foundations in Java, Data Structures and Algorithms, Object-Oriented Programming, and full-stack web development. Experienced in building AI, cloud-integrated, and IoT-based applications with a focus on scalable software solutions. Passionate about developing reliable and user-centric technology.

Education

Symbiosis Institute of technology , BTech in Electronics and telecommunication

July 2023 – June 2027

- GPA: 9.34

Intermediate

Percentage: 83

Matriculation

Percentage: 92

Experience

Product Development Intern, RoboAreana – Pune, Maharashtra

February 2025-May 2025

- Developed and optimized software logic for embedded systems using C/C++ , integrated hardware components, and collaborated with cross-functional teams to deliver functional prototypes.

Skills

Programming Languages: Java, JavaScript, SQL, Python

Development languages: HTML5, CSS3, React.js, Tailwind CSS, Node.js, Express.js, REST APIs

Databases: MySQL, MongoDB, Firebase Realtime Database

Cloud and Tools Firebase, AWS(Fundamentals), Git, GitHub, Linux, VS Code

Computer Science Fundamentals: Data Structures and Algorithms, OOPs, DBMS, Operating Systems, Computer Networks

Software Practices: Object-Oriented Design, Debugging, Testing, Agile Methodology

Soft skills: Communication ,Design Thinking, TeamWork and collaboration , Time Management, Leadership and Initiative, Adaptability and Learning Agility

Projects

Crop Disease Detection using Edge Computing

- Developed an AI-based crop disease classification system using machine learning models and edge computing. Optimized model execution on Jetson Nano for efficient real-time inference.(Under Patent)
- Implemented image processing and machine learning models for disease classification.
- Optimized the model for edge deployment on Jetson Nano enabling faster inference.

StudioP

 GitHub

- Building a modern full-stack developer portfolio using React, Vite, Tailwind CSS, Express.js, and MongoDB, featuring a responsive UI, modular architecture, and planned visitor analytics with Git-based version control.

Simon Plays Game

 GitHub

- Developed an interactive browser-based memory game inspired by the classic Simon Game using HTML, CSS, and JavaScript.
- Strengthened understanding of DOM manipulation, event handling, arrays, asynchronous timing (setTimeout), and application logic.

Achievements

PBL:Got 2nd prize for our project Crop Disease detection at edge during Industry Conclave.

Merit:Awarded College Merit Scholarship for Ranking in the Top 4 of the Batch for Four Consecutive Semesters

SIH 2025,2024: Was in the top 50 team out of 150 to get selected at college level

Participations and Extracurricular

IEEE R@10: Made Flood Sense and presented in the panel of IEEE R@10 challenge

MYOSA- IEEE: Developed AI-powered smart spectacles with real-time object/face recognition and alert system, integrating microcontrollers, sensors, and computer vision algorithms."

SIH 2025: Contributed to the development of a language-agnostic chatbot, enabling multi-language support and intelligent user interaction using AI and LLM techniques."

GOFIG :Volunteered for Gofig at SIT and COEP, Pune, assisting in event coordination and supporting activities under mentorship guidance.

ISKCON: Made a prototype website for a gifting store at ISKCON, Katraj.
